

# CRC energy efficiency scheme

We can help you join the Carbon Reduction Commitment Energy Efficiency Scheme (CRC). If your organisation qualifies we can help you to register and get moving, helping you to improve efficiency and reduce carbon emissions, and enable you to see the rewards from participation earlier. With the Registration and Qualification phase already under way, you must still register under the CRC even if your organisation does not qualify.

**Qualification** – it's essential to check if you qualify; because we have access to so much data in the UK, we are in a unique position to help you find out quickly and accurately. You qualify if you have at least one half-hourly (HH) meter settled in the half-hourly market, and if electricity consumption in the Qualification Period (Jan-Dec 08) was 6,000MWh or more for the total portfolio.

**Registration** – we can help you register smoothly and cost-effectively. Certain costs from the Environmental Agency are associated with registration and it's important to remember that non-qualifying organisations must still disclose all registration information required if they have a half-hourly meter, and also pay a small fee. We will provide advice and information on fees applicable to you.

**Reporting** – the first year of the scheme requires emissions reporting and, in subsequent years, buying allowances that correspond to emissions and surrendering them by year end. We provide a Carbon Calculation service to enable you to clearly define your emissions levels and report accordingly.

**Action** - the CRC rewards organisations that take action to reduce emissions more aggressively and proactively. As the energy and carbon saving experts, this advice service is a recognised pathway into other value added solutions such as Smart Metering, Energy Contract Management and achieving Carbon Neutrality. Reduce your emissions... reduce your costs.
